Data Analyst with 1+ year of experience in **Python, SQL, Excel and Power BI**, specializing in transforming complex datasets into actionable insights, developing **interactive dashboards**, and **automating data workflows** to enhance reporting accuracy and reduce manual effort. Proven ability to perform **exploratory data analysis**, identify key **trends**, and deliver data-driven recommendations that support strategic decision-making and improve business performance.

WORK EXPERIENCE:

Data Engineering & big data specialist | BlackBucks

October 2025 – April 2026

- Processed 100K+ records using Python (Pandas, NumPy) and SQL for efficient data ingestion, transformation, and validation.
- Built and optimized ETL pipelines, improving data processing efficiency and reducing runtime by ~20–30%.
- Performed EDA and applied SQL optimization (joins, indexing, tuning) to generate actionable insights and improve query performance.
- Applied data warehousing and data modeling concepts to deliver reliable datasets supporting analytics and reporting workflows.

Data Analyst(Generative AI & NLP) | SmartInternz

May 2025– July 2025

- Analyzed structured and text datasets using Python (Pandas) and SQL to generate actionable insights for reporting.
- Applied NLP techniques to extract meaningful patterns from text data, enhancing analytical depth.
- Leveraged IBM Cloud AI services and APIs to automate data processing and streamline analytical workflows.
- Performed data cleaning, preprocessing, and exploratory data analysis (EDA) to ensure data quality and support decision-making.

Python Developer | DVSoft

Dec 2024 – April 2025

- Developed modular Python scripts (Pandas, NumPy) to process and transform structured business data for analytics use cases
- Built and maintained ETL pipelines using Python and SQL, enabling reliable data extraction and transformation from multiple sources
- Automated data preprocessing workflows, improving data consistency and reducing manual intervention in data preparation tasks
- Optimized Python-SQL data processing workflows to enhance data retrieval speed and support efficient downstream usage.

SKILLS:

- **Programming & Databases:** Python | SQL (Joins, CTEs, Window Functions, Aggregations)
- **Data Analytics:** Data Cleaning | Data Preprocessing | EDA | Data Quality Checks | Statistical Analysis
- **BI & Visualization:** Power BI (Dashboards, KPI Reporting) | Excel (Pivot Tables, Power Query, VLOOKUP, XLOOKUP) | Streamlit
- **Data Engineering:** ETL Pipelines | Data Pipelines | Workflow Automation | Structured & Unstructured Data Handling
- **Machine Learning:** Regression Models | Classification (Logistic Regression, Random Forest) | SMOTE | Hypothesis Testing
- **Tools & Platforms:** Git | GitHub | Jupyter Notebook | Google Colab | VS Code

PROJECTS:

Insurance Risk & Claims Analysis | [LINK](#)

- **Tools & Technologies:** Power BI, DAX, Power Query, Data Modeling, Excel
- Developed a Power BI dashboard on 30K+ records to track claim frequency and avg claim value (~\$5K) for risk monitoring.
- Identified high-risk segments driving ~20% higher costs, with private car usage contributing ~80% of claims.
- Built optimized data models (DAX, Power Query) for drill-down analysis across age groups, coverage, and customer profiles.
- Automated reporting workflows, reducing manual effort by ~30% and accelerating insight delivery.

Swiggy Sales & Customer Insights Analysis | [LINK](#)

- **Tools & Technologies:** Excel (Pivot Tables, Charts, Data Cleaning)
- Optimized peak-hour operations by analyzing weekend demand trends in Excel and recommending capacity scaling to reduce delays.
- Targeted high-revenue segments (non-veg ~55%, top cities) to drive promotions, partnerships, and sales growth.
- Improved low-performing regions through localized offers, restaurant onboarding, and geo-targeted marketing.
- Increased retention and order value using ratings (~4.34) and AOV (~₹268) to refine quality and pricing strategies.

Credit Card Fraud Detection & Real-Time Risk Analysis | [LINK](#)

- **Tools & Technologies:** Python, Pandas, NumPy, Scikit-learn, Streamlit
- Developed ML models (Random Forest, Logistic Regression) to detect fraudulent transactions in highly imbalanced datasets.
- Improved fraud detection by applying SMOTE and feature engineering, increasing minority class recall.
- Built an interactive Streamlit dashboard for real-time fraud prediction and transaction monitoring.
- Assessed model performance using precision, recall, and F1-score to ensure reliable risk detection.

CERTIFICATIONS:

- Machine Learning Using Python – [NPTEL](#)
- Data Visualization Empowering Business with Effective Insights – [Forage \(TATA\)](#)
- Professional Certificate Program in AI and Data Science – [UpGrad \(PWC\)](#)
- Generative AI for Data Science & AI Practitioners – [UpGrad \(Microsoft\)](#)

EDUCATION:

- **B.Tech in Computer Science and Engineering (AI & ML)** – Chebrolu Engineering College (JNTUK) - 8.6 CGPA

ACHIEVEMENTS:

- Solved **90+ LeetCode** problems using Python and SQL, strengthening **analytical** and **problem-solving** skills.
- Completed 3 internships in **Data Analytics**, NLP, and Python Development while building 4+ end-to-end projects using ML, Python, **Streamlit**, Power BI, and Excel.
- Earned **Elite NPTEL** certification in Machine Learning Using Python with a score of **70/100**.
